Program Specification of Master Degree in Forensic medicine & clinical toxicology

Sohag University                                           Faculty of Medicine

A. Basic Information
1. Program title: Master Degree in Forensic Medicine & Clinical Toxicology
2. Program type: Multiple
3. Faculty: Faculty of Medicine
4. Department: Forensic Medicine & Clinical Toxicology.
5. Coordinator: Dr. Soheir Ali Mohamed
7. External evaluator: Prof. Dr. Ragaa Mohamed Abdel Maboud
8. Last date of program specifications approval: Faculty council No. 219, decree No. (8115) dated 19/12/2011, re-approval: Faculty council No. 228, decree No. 9801 dated 10/9/2012.

B. Professional Information:
1. Program aims:
   The aim of this program is to provide the graduate with the medical knowledge and skills essential for the practice of specialty and necessary to gain further training and practice in the field of forensic medicine & clinical toxicology through providing
   1. Scientific knowledge essential for practice of forensic medicine & clinical toxicology according to the international standards.
   2. Skills necessary for proper diagnosis of forensic and toxicology cases, problems solving and decision making.
   3. Ethical principles related to the practice in this specialty
   4. Active participation in community needs assessments and problem solving.
   5. Maintenance of learning abilities necessary for continuous medical education.
   6. Maintenance of research interest and abilities.

2. Attributes of the post graduate:
   1. Mastering the basics of scientific research methodologies.
   2. The application of the analytical method and used in the field of Forensic medicine
   3. The application of specialized knowledge and integrate it with the relevant knowledge in practice.
   4. Be aware of the problems and has modern visions in the field of Forensic medicine
   5. Identify problems in the field of Forensic medicine and find solutions to them.
   6. Mastery of professional skills in this specialty and use of the appropriate recent technologies supporting these skills.
7. Communicate effectively and the ability to lead work teams.
8. Decision-making in his professional contexts.
9. To employ and preserve the available resources to achieve the highest benefit.
10. Awareness of his role in the community development and preservation of the environment at the lights of both international and regional variables.
11. Reflects the commitment to act with integrity and credibility, responsibility and commitment to rules of the profession.
12. Academic and professional self development and be capable of continuous learning.

3. **Intended learning outcomes (ILOs):**

   a) **Knowledge and understanding:**

      By the end of the study of master program in forensic medicine and clinical toxicology the graduate should be able to:

      a1. List types and procedure for forensic autopsy.
      a2. Describe how to examine the scene of death and diagnose death.
      a3. Describe medico legal aspects of personal identification of living and dead human bodies
      a4. Mention the pathology of wounds and different types of injuries in human body.
      a5. Explain of forensic serology that deals with different body fluids.
      a6. Mention the analytical and instrumental methods used in investigating crimes.
      a7. Describe extraction of various drugs or poisons from body fluids and the keratinized tissues
      a8. Describe principles of toxicology of different types of poisonous substances and drugs including classification, mechanism of action and clinical features of toxicity.
      a9. Describe examination of the scene of death in cases of poisoning
      a10. List chemicals and drugs which induce organ toxicity.
      a11. Demonstrate the criteria, clinical features, diagnosis and general management of dependence producing substances and drugs
      a12. Mention the antidotal studies and evaluation of toxicity in human subjects.
      a13. List the general scheme for testing drugs or poisons
      a14. Mention the sources of data collection for vital statistics
      a15. Mention how to construct tables and graphs.
      a16. Enumerate Scientific developments in the field of forensic medicine and clinical toxicology
      a17. Describe the mutual influence between professional practice and its impacts on the environment.
      a18. Mention the ethical and legal principles of professional practice in the field of forensic medicine and clinical toxicology
      a19. Mention the principles and fundamentals of quality in professional practice in the field of forensic medicine and clinical toxicology

   b) **Intellectual skills:**

      By the end of the study of master program in forensic medicine and clinical toxicology the graduate should be able to:

      b1. Interpret the features of the scene of the crime in the field of forensic medicine and clinical toxicology for proper diagnosis of forensic and toxicology cases.
b2. Select from different diagnostic alternative the ones that help reaching a final diagnosis for forensic and toxicology cases.
b3. Link between knowledge for Professional problems' solving.
b4. Conduct a research study and / or write a scientific study on a research problem.
b5. Assess risk in professional practices in the field of forensic medicine and clinical toxicology.
b6. Plan to improve performance in the field of forensic medicine and clinical toxicology.
b7. Identify forensic medicine and clinical toxicology problems and find solutions.
b8. Analyze research and issues related to the forensic medicine and clinical toxicology.

c) **Professional and practical skills**
   By the end of the study of master program in forensic medicine and clinical toxicology the graduate should be able to:
c1. Mention the basic and modern professional skills in the area of forensic medicine and clinical toxicology.
c2. Write and evaluate of medico legal reports.
c3. Assess methods and tools existing in the area of forensic medicine and clinical toxicology.

d) **General and Transferable skills**
   By the end of the study of master program in forensic medicine and clinical toxicology the graduate should be able to:
d1. Communicate effectively by all types of effective communication.
d2. Use information technology to serve the development of professional practice.
d3. Assess himself and identify personal learning needs.
d4. Use different sources to obtain information and knowledge.
d5. Develop rules and indicators for assessing the performance of others.
d6. Work in a team, and team's leadership in various professional contexts.
d7. Manage time Efficiently.
d8. Learn himself continuously.

4. **Academic Standards:**
   Sohag Faculty of Medicine adopted the general National Academic Reference Standards (NARS) provided by the national authority for quality assurance and accreditation (naqaae) for postgraduate program. This was approved by the faculty Council decree No. 6854, in its cession No. 177 Dated : 18/5/2009. Based on these NARS; The Academic Reference Standards (ARS) were suggested for this program These ARS were approved by the faculty council decree No7528, in its cession No 191, dated : 15/3/2010. The adoption of NARS and the suggested ARS were approved by University council degree No 587, in its cession No.60. dated 26-12-2011.

5. **Curriculum structure and contents:**
   5.a- Program duration: 6 semesters (3 years).
   5.b- Program structure :
   5.b.i- Number of hours per week:

### 7. Program admission requirements

I- General Requirements.

1. Candidate should have either:
   i. MBBch degree from any Egyptian Faculty of Medicine or
   ii. Equivalent Degree from Medical Schools abroad approved by the ministry of high Education.
2. Candidate should pass the house office training year.
3. Those who are not university hospital residents should pass a training for at least 12 months in one of the known hospitals.
4. Follow postgraduate bylaw Regulatory rules of Sohag Faculty of Medicine approved by the ministerial decree No. (44), dated 6/1/2010.

5. Specific requirements:
   A- Candidates graduated from Egyptian Universities should have at least "Good Rank "in their final year / cumulative years examination and grade "Good Rank "in Forensic and Clinical toxicology course too.
   B- Graduate should know how to speak & write English well.
   C- Graduate should have computer skills.

### 8. Regulations for Progression and Program Completion
Duration of program is 50 credit hours (≥4 semesters ≥3 years), starting from registration till 2nd part exam; divided to:

First Part: (15 Credit hours ≥6 months ≥1 semester):
- Program-related basic & clinical sciences & research Methodology, Ethics & medical reports, Biostatistics and computer.
- At least six months after registration should pass before the student can ask for examination in the 1st part.
- Two sets of exams: 1st in October — 2nd in April.
- At least 50% of the written exam is needed to pass in each course.
- For the student to pass the first part exam, a score of at least 60% (Level D) in each course is needed.
- Those who fail in one course need to re-exam it only for the next time only, and if re-fail, should register for the course from the start.
- Thesis/Essay(6 Credit hours ≥6 months=1 semester):
  - Completion of the 1st part credit hours and passing the exams are pre requisites for documentation of the Thesis/Essay subject.
    o Should be completed, defended and accepted after passing the 1st part examination, and at least one month before allowing to enter 2nd part final examination.
    o Accepting the thesis is enough to pass this part.

Second Part: (24 Credit hours ≥18 months = 3 semesters):

Program related specialized sciences in forensic medicine and clinical toxicology courses

- Completion of the 1st part credit hours and passing the exams are pre requisites for documentation of the 2nd part courses.
- After passing at least:
  - Practical training : 36 months training in the department of in forensic medicine and clinical toxicology courses
  - The students should pass the 1st part before asking for examination in the 2nd part.
  - Fulfillment of the requirements in each course as described in the template and registered in the log book (5 Credit hours; with obtaining ≥75% of its mark ) is a prerequisite for candidates to be assessed and undertake part 1 and part 2 examinations; the credit hours of the logbook are calculated as following:
    - Each Cr. Hr.= 60 working Hrs.
    - Logbook= 5 Cr. Hr. X 60 working Hrs = 300 Working Hrs.
    - Collection of working Hrs. is as following:

<table>
<thead>
<tr>
<th>Activity</th>
<th>Hrs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Grand rounds</td>
<td>6</td>
</tr>
<tr>
<td>Training courses</td>
<td>12/ day</td>
</tr>
<tr>
<td>Conference attendance</td>
<td>12/day 18/day</td>
</tr>
<tr>
<td>Thesis discussion</td>
<td>6</td>
</tr>
<tr>
<td>Workshops</td>
<td>حضور ورش عمل</td>
</tr>
<tr>
<td>-----------</td>
<td>--------------</td>
</tr>
<tr>
<td>Journal club</td>
<td>ندوة النشرات الحديثة</td>
</tr>
<tr>

</tr>
<tr>
<td>Morbidity and Mortality conference</td>
<td>ندوة تحليل المخاطر المرضية أو الوفاة</td>
</tr>
<tr>
<td>Self education program</td>
<td>برنامج التعلم الذاتي</td>
</tr>
</tbody>
</table>

- Two sets of exams: 1st in October - 2nd in April.
- At least 50% of the written exam is needed to pass in each course.
- For the student to pass the 2nd part exam, a score of at least 60% (Level D) in each course is needed.

### 9. Methods of student assessments:

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>The assessed ILOs</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-Activities</td>
<td>General transferable skills, intellectual skills</td>
</tr>
<tr>
<td>2-Written Exams:</td>
<td>- Knowledge, intellectual skills</td>
</tr>
<tr>
<td>Short essay: 40%</td>
<td>- Knowledge, intellectual skills</td>
</tr>
<tr>
<td>structured questions: 25%</td>
<td>- Intellectual skills, General transferable skills</td>
</tr>
<tr>
<td>MCQs: 20%</td>
<td>Practical skills, intellectual skills, general transferable skills</td>
</tr>
<tr>
<td>Commentary, Problem solving: 15%</td>
<td>Knowledge, Intellectual skills, General transferable skills</td>
</tr>
<tr>
<td>3-OSCE/ OSPE</td>
<td>50%</td>
</tr>
<tr>
<td>4-Structured Oral Exams</td>
<td>Knowledge, Intellectual skills, General transferable skills</td>
</tr>
</tbody>
</table>

### Assessment schedule:

#### Part I:
- Clinical Pharmacology, General Toxicology and Medical Ethics & responsibility: Written Exam (2 hours) + structured oral Exam OSPE.
- Forensic chemistry: Written Exam (2 hours) + OSPE + structured oral Exam
- Pathology: Written Exam (2 hours) + OSPE + structured oral Exam
- Internal Medicine: Written Exam (2 hours) + OSCE + structured oral Exam
- Biostatistics & Computer and Research Methodology: Written Exam (2 hours) + Structured oral Exam + OSPE

#### Part II:
- Four Written Exams (3 hours for each) two for Clinical Toxicology and two for Forensic Medicine and Injuries & infirmity + OSCE for Clinical Toxicology + OSPE for Forensic Medicine and Injuries & infirmity + Structured oral Exam for each.

### 10. Evaluation of program. ARC revised by external evaluator

Course Specification of Clinical Pharmacology, general toxicology and medical ethics and responsibilities for master degree in Forensic Medicine & Clinical Toxicology

Sohag University Faculty of Medicine

Course Specifications

1. Programme(s) on which the course is given: Master degree in forensic medicine & clinical toxicology
2. Major or Minor element of program: Minor.
3. Department offering the program: Dept. of Forensic Medicine & Clinical Toxicology
4. Department offering the course: Dept. of Clinical Pharmacology Dept. and Forensic Medicine & Clinical Toxicology
5. Academic year / Level: 1st part
6. Date of specification approval: Faculty council No. "250", decree No. "1378" dated 28/12/2013

A. Basic Information

Title: Clinical Pharmacology, general toxicology and medical ethics and responsibilities for master degree in Forensic Medicine & Clinical Toxicology
Code: FOR:0509-200

B. Professional Information

1. Overall Aims of Course

Clinical Pharmacology module:
By the end of this course the student should be able to safely practice medicine guarded by knowledge of the pharmacological properties, pharmacokinetics mechanism of action, side effects and interactions of the common drugs which operate on the human body. Also he/she can diagnose and describe general management of poisoned patient independently.

General toxicology module:

By the end of this course the student should be able to safely practice medicine guarded by knowledge of types, actions, clinical features and circumstances of poisoning which operate on the human body. Also he/she can diagnose and describe general management of poisoned patient independently.

Medical ethics and responsibilities module:
By the end of this course the student should be able to safely practice medicine guarded by medical ethics and avoiding malpractice. Also he/she can deal with medical problems and can diagnose and detect medical responsibility independently.

2. **Intended Learning Outcomes of Course (ILOs)**

**Clinical Pharmacology module:**

a) **Knowledge and Understanding:**
By the end of the course, students should be able to:

a1. Describe principles of toxicology of different types of poisonous substances and drugs including classification, mechanism of action,
a2. List the pharmacological properties and pharmacokinetics of different types of poisonous substances and drugs.
a3. List drug interactions and the main side effects.
a4. List chemicals and drugs which induce organ toxicity.
a5. Demonstrate the criteria, clinical features, diagnosis and general management of dependence producing substances and drugs.
a6. Mention the antidotal studies.
a7. List the general scheme for testing drugs or poisons.
a8. Describe scientific developments in the field of Clinical Pharmacology.
a9. Mention the ethical and legal principles of professional practice in the field of Clinical Pharmacology.
a10. Mention the principles and fundamentals of quality in professional practice in the field of Clinical Pharmacology.
a11. Describe the basics and ethics of scientific research.

b) **Intellectual Skills**
By the end of the course, students should be able to:

b1. Link between knowledge for professional problems' solving.
b2. Conduct a research study and/or write a scientific study on a research problem.
b3. Plan to improve performance in the field of Clinical Pharmacology.
b4. Analyze research and issues related to Clinical Pharmacology.

c) **Professional and Practical Skills**
By the end of the course, students should be able to:

c1. Extract various drugs or poisons from body fluids.

d) **General and Transferable Skills**
By the end of the course, students should be able to:

d1. Communicate effectively by all types of effective communication.
d2. Manipulate computer programs, do web search, to write an essay about recent subjects of Clinical Pharmacology which related to toxicology, with trial of solving.
d3. Use different sources to obtain information and knowledge.
d4. Develop rules and indicators for assessing the performance of others.
d5. Work together to perform some laboratory tests for detection of some poisons.

**General toxicology module:**

a) **Knowledge and Understanding:**
By the end of the course, students should be able to:
a1. Describe principles of toxicology of different types of poisonous substances and drugs including classification, mechanism of action and clinical features of toxicity.
a2. Describe general management of poisoned patient (alert and comatose).
a3. Describe examination of the scene of death in cases of poisoning.
a4. List chemicals and drugs which induce organ toxicity.
a5. Mention the antidotal studies.
a6. Describe Scientific developments in the field of clinical toxicology.
a7. Mention the ethical and legal principles of professional practice in the field of clinical toxicology.
a8. Describe the principles and fundamentals of quality in professional practice in the field of clinical toxicology.

b) Intellectual Skills
   By the end of the course, students should be able to:
b1. Interpret the features of the scene of the crime in the field of forensic medicine and clinical toxicology for proper diagnosis of toxicology cases.
b2. Select from different diagnostic alternative the ones that help reaching a final diagnosis for toxicology cases.
b3. Interpret features of a case study of poisoning to solve the problem.
b4. Conduct a research study and/or write a scientific study on a research problem.
b5. Assess risk in professional practices in the field of clinical toxicology.
b6. Plan to improve performance in the field of clinical toxicology.
b7. Analyze case scenario of intoxicated patient and formulate treatment plan.
b8. Analyze research and issues related to clinical toxicology.

(c) Professional and Practical Skills
   By the end of the course, students should be able to:
c1. Perform some chemical tests on laboratory to identify some poisons.
c2. Write and evaluate standard medical report about a case of poisoning through interpretation of history, clinical examination and laboratory test findings.
c3. Assess methods and tools existing in the area clinical toxicology.

d) General and Transferable Skills
   By the end of the course, students should be able to:
d1. Communicate with each others and interact effectively and ethically with patients presenting with signs of poisoning in the admission units of the hospitals then write a report about the case and discuss it with staff members.
d2. Manipulate computer programs, do web search, to write an essay about recent subjects of general toxicology or worldwide problems related to toxicology, with trial of solving.
d3. Assess himself and identify personal learning needs.
d4. Use of different sources for information and knowledge.
d5. Develop rules and indicators for assessing the performance of others.
d6. Work in a team, and team's leadership to perform some laboratory tests about detection of some poisons.
d7. Manage time efficiently.
d8. Present orally a toxicological reports in accordance with the standard scientific guidelines in seminars or group meetings, discuss results, defend his/her ideas with staff members. Students can recognize and accept the limitations in their knowledge and clinical skills.

Medical ethics and responsibilities module:

a) Knowledge and Understanding:
By the end of the course, students should be able to:
a1. Mention types and items of consent.
a2. Mention professional secrecy.
a3. Mention types of malpractice.
a4. Mention items of medical responsibility.
a5. Describe ethical considerations of medical research involving human subjects.
a6. Mention the principles and fundamentals of ethics and legal aspects of professional practice in the field of forensic medicine and clinical toxicology.
a7. Describe the basics and ethics of scientific research.

b) **Intellectual Skills**

By the end of the course, students should be able to:
b1. Interpret the theories and principles that govern ethical decision making, especially of the major ethical dilemmas in medicine.
b2. Formulate the threats to medical professionalism and common medical errors which can occur during practice of medicine.
b3. Select from different diagnostic tools the one that can reach problem solving.
b4. Link between knowledge for Professional problems solving.
b5. Assess risk in professional practices in the field of forensic medicine and clinical toxicology.
b6. Identify forensic medicine and clinical toxicology problems and find solutions.
b7. Analyze research and issues related to the medical ethics & responsibilities.

c) **Professional and Practical Skills**

By the end of the course, students should be able to:
c1. Describe the basic and modern professional skills in the area of forensic medicine and clinical toxicology.
c2. Write and evaluate standard medical report about a case of malpractice or medical responsibilities through interpretation the findings of the case.
c3. Assess methods and tools existing in the area of forensic medicine and clinical toxicology.

d) **General and Transferable Skills**

By the end of the course, students should be able to:
d1. Communicate with each others and interact effectively and ethically with the patients.
d2. Manipulate computer programs, do web search, to write an essay about worldwide problems or a subject in medical ethics.
d3. Assess himself and identify personal learning needs.
d4. Use different sources to obtain information and knowledge.
d5. Develop rules and indicators for assessing the performance of others.
d6. Work in a team, and team's leadership in various professional contexts.
d7. Present reports about major ethical dilemmas in medicine in accordance with the standard scientific guidelines in seminars or group meetings, discuss results, defend his/her ideas with staff members.

B- Professional Information

1. Overall Aims of Course

- Provide essential knowledge about trace evidence obtained after a crime is committed.
- Provide basic knowledge about various separation, extraction, detection and quantitation techniques of certain substance or drug.
- Describe the common procedures, techniques, and applications of forensic chemistry.

2. Intended Learning Outcomes of Course (ILOs)

a) Knowledge and Understanding:
   By the end of the course, students should be able to:

a-1 Explain of forensic serology that deals with different body fluids.
a1. List the analytical and instrumental methods used in investigating crimes.
a2. Describe principles of preparation of different eluents and spraying reagents used in thin layer chromatography.
a3. Describe principles of color test.
a4. Describe examination of the scene of death in cases of poisoning.
a5. Describe different methods of samples collection at the scene of the crime.
a6. List chemicals and drugs which induce organ toxicity.
a7. Demonstrate the criteria, clinical features, diagnosis and detection of dependence producing substances and drugs.
a8. Describe Scientific developments in the field of forensic chemistry.
a9. Mention the ethical and legal principles of professional practice in the field of forensic chemistry.
a10. List the principles and fundamentals of quality in professional practice in the field of forensic chemistry.
a11. List the basics and ethics of scientific research.

b) Intellectual Skills
By the end of the course, students should be able to:
b1. Interpret the features of the scene of the crime in the field of forensic medicine and clinical toxicology for proper diagnosis of forensic and toxicology cases.
b2. Select from different diagnostic alternative the ones that help reaching a final diagnosis for forensic and toxicology cases.
b3. Conduct research studies that adds to knowledge.
b4. Plan appropriately in the research design.
b5. Plan to improve performance in the field of forensic chemistry.
b6. Identify forensic medicine and clinical toxicology problems and find solutions.
b7. Analyze research and issues related to the forensic chemistry.

c) Professional and Practical Skills
By the end of the course, students should be able to:
c1. Perform general scheme for testing some groups of poisons.
c2. Extract certain substances or drugs using the separating funnel either in acidic or in alkaline media.
c3. Extract various drugs or poisons from body fluids and the keratinized tissues such as human hair and finger nails.
c4. Prepare the plates of thin layer chromatography using silica gel G.
c5. Prepare of the different eluents used in thin layer chromatography and the suitable spraying reagent.
c6. Write and evaluate medico legal reports.
c7. Assess methods and tools existing in the area of forensic chemistry.

d) General and Transferable Skills
By the end of the course, students should be able to:
d1. Manipulate computer programs, do web search, to write an essay about a subject in forensic chemistry.
d2. Use information technology to serve the development of professional practice.
d3. Assess himself and identify personal learning needs.
d4. Use different sources to obtain information and knowledge.
d5. Develop rules and indicators for assessing the performance of others.
d6. Work together to perform some laboratory tests for detection of some poisons

d7. Manage time Efficiently.

d8. Present reports in accordance with the standard scientific guidelines in seminars or group meetings, discuss results, defend his/her ideas with staff members

</tr>
</tbody>
</table>

B. Professional Information:

1. Overall Aims of Course
   By the end of the course of Internal Medicine, the candidate should be able to:
   1. Deal with common medical conditions on the basis of adequate history taking, physical examination, interpretation of relevant supportive investigations and management.
   2. Deal with acute medical emergencies and especially those that may lead to sudden death safely and effectively.
   3. Perceive and integrate progress in medical technology.

2. Intended Learning Outcomes of Course (ILOs)
   a) Knowledge and Understanding:
      By the end of the course, students should be able to
      a1. Appreciate the clinical spectrum of common medical conditions with multisystem affection.
      a2. Describe the concept of emergency management of acute medical disorders associated with toxicity or injury.
a3. Describe Scientific developments in the field of internal medicine.
a4. Mention the ethical and legal principles of professional practice in the field of internal medicine.
a5. List the principles and fundamentals of quality in professional practice in the field of internal medicine.
a6. List the basics and ethics of scientific research

b) **Intellectual Skills**
   By the end of the course, students should he able to
   b1. Interpret the features taken from the history in the field of internal medicine for proper diagnosis of cases.
b2. Select from different diagnostic alternative the ones that help reaching a final diagnosis for internal medicine cases
b3. Link between knowledge for Professional problems' solving.
b4. Assess risk in professional practices in the field of internal medicine.
b5. Plan to improve performance in the field of internal medicine.
b6. Analyze research and issues related to the forensic medicine and clinical toxicology.

c) **Professional and Practical Skills**
   By the end of the course, students should he able to
c1. Mention of the basic and modern professional skills in the area of internal medicine.
c2. Write and evaluate of medical reports

d) **General and Transferable Skills**
   By the end of the course, students should he able to
d1. Communicate with each others and interact effectively and ethically with patients presenting with signs of poisoning in the admission units of the hospitals then write a report about the case and discuss it with staff members.
d2. Manipulate computer programs, do web search, to write an essay about recent subjects of internal medicine related to toxicology, with trial of solving.
d3. Assess himself and identify personal learning needs.
d4. Use different sources to obtain information and knowledge.
d5. Develop rules and indicators for assessing the performance of others.
d6. Develop rules and indicators for assessing the performance of others.
d7. Work in a team, and team's leadership in various professional contexts.
d8. Manage time Efficiently.
d9. Learn him self continuously

B. Professional Information
1. Overall Aims of Course
   Provide essential knowledge about pathogenesis and pathologic manifestation of poisoning and injuries.
2. Intended Learning Outcomes of Course (ILOs)
   a) Knowledge and Understanding:
      By the end of the course, students should be able to:
      a1. Describe bases of general and systemic pathology.
      a2. Describe etiology, pathogenesis and pathologic manifestation of diseases and injuries.
      a3. Mention the progress, complications and fate of different types of injuries of human body.
      a4. List Scientific developments in the field of pathology.
      a5. Mention the ethical and legal principles of professional practice in the field of pathology.
      a6. List the principles and fundamentals of ethics and legal aspects of professional practice in the field of pathology.
      a7. List the basics and ethics of scientific research.

26
b) Intellectual Skills

By the end of the course, students should be able to:
b1. Select from different diagnostic tools the one that can reach problem solving.
b2. Conduct research studies that adds to knowledge.
b3. Conduct a research study and/or write a scientific study on a research problem.
b4. Assess risk in professional practices in the field of pathology.
b5. Plan to improve performance in the field of pathology.
b6. Identify pathology problems and find solutions.
b7. Analyze research and issues related to pathology.

c) Professional and Practical Skills

By the end of the course, students should be able to:
c1. Master the basic and modern professional skills in the area of pathology.
c2. Write and evaluate pathological report.
c3. Assess methods and tools existing in the area of pathology.

d) General and Transferable Skills

By the end of the course, students should be able to:
d1. Communicate effectively by all types of effective communication.
d2. Use information technology to serve the development of professional practice.
d3. Assess himself and identify personal learning needs.
d4. Use different sources to obtain information and knowledge.
d5. Develop rules and indicators for assessing the performance of others.
d6. Work in a team, and team's leadership in various professional contexts.
d7. Manage time efficiently.
d8. Learn himself continuously.

6. List of References

6.1-Course notes :
Lectures notes prepared by the stuff members of the department.

6.2- Essential Books (Text Books):
- Muir’s text book of pathology.
- Robbins pathologic basis of diseases.

6.3- Recommended Books:
- Rosi & Ackerman text book of pathology.
- Sternberg text book of pathology.

6.4- Periodicals, American journal of pathology
- Pathology
- Human pathology

7. Facilities Required for Teaching and Learning

1-ADEQUATE INFRASTRUCTURE: including teaching places (teaching class, teaching halls, teaching laboratory), comfortable desks, good source of aeration, bathrooms, good illumination, and safety & security tools.
2-TEACHING TOOLS: including screens, computers including cd (rw), data shows, projectors, flip charts, white boards, video player, digital video camera, scanner, copier, colour and laser printers.
3- COMPUTER PROGRAM: for designing and evaluating MCQs

Course Coordinator: Dr. Fatma Al Zahraa

Head of Department: Dr. Eman Muhammad Salah El Deen

Date: 18/12/2011, Revised: 1/9/2012, Revised: 1/12/2013
Course Specifications of Applied Biostatistics (with computer use) and Research Methodology in Master degree of Forensic Medicine & Clinical Toxicology

Sohag University
Faculty of Medicine

1. Program title : Master degree in Audiology
2. Major/minor element of the program : Minor
3. Department offering the course: Community Medicine and public Health Dep.
4. Department offering the program: Forensic Medicine & Clinical Toxicology
5. Academic year /level : 1st part
6. Date of specification approval: Faculty council No. "250", decree No. "1378" dated 28/12/2013

B. Professional Information
Applied Biostatistics Module:
1. Overall Aims of Course
   a. To influence the students to adopt an analytical thinking for evidence based medicine.
   b. To use precisely the research methodology in researches and computer programs SPSS, Epi Info and Excel in data analysis.

Research Methodology Module:
1. Overall Aims of Course
The aim of this course is to provide the postgraduate student with the advanced medical knowledge and skills essential for the mastery of practice of specialty and necessary to provide further training and practice in the field of Public health and Community Medicine through providing:
   1. Recent scientific knowledge essential for the mastery of practice of Public Health and Community Medicine according to the international standards.
   2. Skills necessary for preparing for proper diagnosis and management of community problems, skills for conducting and supervising researches on basic scientific methodology.
   3. Ethical principles related to the practice in this specialty.
   4. Active participation in community needs assessment and problems identification.
   5. Maintenance of learning abilities necessary for continuous medical education.
6. Upgrading research interest and abilities.

2. **Intended Learning Outcomes of Courses (ILOs)**

**Applied Biostatistics Module:**

a) **Knowledge and understanding:**

   By the end of the course, the student is expected to be able to:
   
   a1. Mention different programs of analysis of data and statistical packages
   
   a2. Define the recent advances of sources of data and methods of collection.
   
   a3. Summarize data, construct tables and graphs
   
   a4. Calculate measures of central tendency and measures of dispersion
   
   a5. Describe the normal curves and its uses
   
   a6. Illustrate selected tests of significance and the inferences obtained from such tests
   
   a7. Illustrate selected tests of significance for parametric and non-parametric inferences
   
   a8. Identify factor analysis and discrimination analysis.

b) **Intellectual Skills**

   By the end of the course, the student is expected to be allowed to:
   
   b1. Mention how to collect and verify data from different sources
   
   b2. Interpret data to diagnose prevalent clinical pathology

   c) **Professional and Practical Skills:**

   By the end of the course, the student is expected to practice the following:
   
   c1. Perform recent advanced technological methods in collection, analysis and interpretation of data and in management of prevalent problems in clinical pathology

   d) **General and Transferable Skills:**

   By the end of the course, the student is expected to be able to:
   
   d1. Use appropriate computer program packages.
   
   d2. Use of different sources for information and knowledge about biostatistics.

**Research Methodology Module:**

2. **Intended Learning Outcomes of Courses (ILOs)**

a) **Knowledge and understanding:**

   By the end of the course, the student is expected to be able to:
   
   a1. Define the recent advances of screening tests pertinent to selected diseases and the at-risk approach in the application of screening tests.
   
   a2. Explain the usefulness of screening tests, and calculate sensitivity, specificity, and predictive values.
   
   a3. Describe the study design, uses, and limitations.
   
   a4. Mention the recent advances of principles, methodologies, tools and ethics of scientific research.
   
   a5. Explain the strategies and design of researches.
   
   a6. Describe bias and confounding.
   
   a7. Describe sampling techniques and list advantages of sampling
   
   a8. Identify principles of evidence based medicine.

b) **Intellectual Skills**

   By the end of the course, the student is expected to be able to:
b1. Conduct research studies that adds to knowledge.
b2. Formulate scientific papers in the area of public health and community medicine
b3. Innovate and create researches to find solutions to prevalent community health problems
b4. Criticize researches related to public health and community medicine

c) **Professional and Practical Skills:**
By the end of the course, the student is expected to be able to:
c1. Enumerate the basic and modern professional skills in conducting researches in the area of public health and community medicine.
c2. Design new methods, tools and ways of conducting researches.

d) **General and Transferable Skills:**
By the end of the course, the student is expected to be able to:
d1. Use of different sources for information and knowledge to serve research.
d2. Work coherently and successfully as a part of a team and team's leadership in conducting researches and field studies.

B. Professional Information

1. Overall Aims of Course

Forensic medicine module:
Provide basic knowledge of different types of injuries and how to diagnose death and differentiate between natural and criminal causes. Also he/she can diagnose injuries and determine the percent of permanent infirmity accurately. The student should also be able to examine the scene of the crime and write a medicolegal report independently.

Injuries and infirmities module:
Provide basic knowledge of different types of injuries and toxins which can cause permanent infirmity. The student should be able to examine the injured person and determine the percent of permanent infirmity accurately. Write a medicolegal report about work injuries independently.

Clinical Toxicology module:
Provide basic knowledge of different types of poisonous substances and drug. Demonstration of knowledge of types, actions, clinical features, circumstances, diagnosis, detection, and management of poisoning which operate on the human body. Demonstrate the criteria, clinical features, diagnosis and general
management of dependence producing substances and drugs

2. **Intended Learning Outcomes of Course (ILOs)**

**Forensic medicine module :**

**(a) Knowledge and Understanding:**

By the end of the course, students should be able to:

a1. Mention types and procedure for forensic autopsy.
a2. Describe how to examine the scene of death and diagnose death.
a3. Demonstrate the pathophysiology of death, postmortem changes, and decomposition.
a4. Demonstrate knowledge of abuse of human rights; deaths in custody.
a5. Explain the medico legal aspects of suffocation and asphyxial deaths.
a6. Explain the medico legal aspect of deaths associated with surgical procedures.
a7. Describe principles and medico legal aspects of personal identification of living and dead human bodies.
a8. Mention the in the pathology of wounds and different types of injuries in human body.
a9. Explain types of head and spinal injuries.
a10. Explain types of chest and abdominal injuries.
a11. Explain self inflicted injury.
a12. Explain medicolegal aspects of firearm injuries and explosion deaths.
a13. Demonstrate transportation injuries.
a14. Explain the medicolegal aspects of neglect, starvation and hypothermia.
a15. Explain medicolegal aspect of sexual crimes and child abuse.
a16. Explain the medicolegal aspects of pregnancy, delivery, abortion.
a17. Explain medicolegal aspects of infanticide and sudden death in infancy.
a18. Explain the medicolegal aspect of dysbarism and barotrauma.
a19. Explain forensic serology that deals with different body fluids.
a20. List Scientific developments in the field of forensic medicine.
a21. Describe Scientific developments in the field of forensic medicine.
a22. Mention the ethical and legal principles of professional practice in the field of forensic medicine.
a23. Mention the principles and fundamentals of ethics and legal aspects of professional practice in the field of forensic medicine.

**(b) Intellectual Skills**

By the end of the course, students should be able to:

b1. Interpret the features of the scene of the crime in the field of forensic medicine and clinical toxicology for proper diagnosis of forensic cases.
b2. Select from different diagnostic alternative the ones that help reaching a final diagnosis for forensic medicine.
b3. Analyze features of a case study of injuries or criminal deaths to solve the problem.
b4. Conduct a research study and/or write a scientific study on a research.
b5. Assess risk in professional practices in the field of forensic medicine.
b6. Plan to improve performance in the field of forensic medicine.
b7. Identify of forensic problems and find solutions.
b8. Analyze research and issues related to the forensic medicine.
c) **Professional and Practical Skills**

By the end of the course, students should be able to:

- c1. Examine and write medicolegal report on bone and soft tissue specimens on the museum.
- c2. Examine criminal deaths and perform autopsy.
- c3. Write and evaluate standard medico-legal report of injured person.
- c4. Evaluate and develop methods and tools existing in the area of forensic medicine.

d) **General and Transferable Skills**

By the end of the course, students should be able to:

- d1. Communicate with each other's and interact effectively and ethically with injured person then write a report about the case and discuss it with staff members.
- d2. Manipulate computer programs, do web search, to write an essay about recent subjects of forensic medicine with trial of solving.
- d3. Assess himself and identify personal learning needs.
- d4. Use of different sources for information and knowledge.
- d5. Develop rules and indicators for assessing the performance of others.
- d6. Work in a team, and team's leadership to perform some laboratory tests for personal identification or to perform autopsy.
- d7. Manage time efficiently.
- d8. Present reports orally about forensic cases in accordance with the standard scientific guidelines in seminars or group meetings, discuss results, defend his/her ideas with staff members.

**Injuries and infirmities module:**

a) **Knowledge and Understanding:**

By the end of the course, students should be able to:

- a1. Explain and define permanent infirmity.
- a2. Describe different types of injuries which can cause permanent infirmity.
- a3. Describe different types of poisons which can cause permanent infirmity.
- a4. Describe different types of injuries to which the worker can be exposed during his work.
- a5. Describe different types of toxins to which the worker can be exposed during his work.
- a6. Describe how to examine the injured person.
- a7. Describe how to examine the poisoned person.
- a8. Explain how to determine the percent of permanent infirmity.
- a9. Mention the ethical and legal principles of professional practice in the field of forensic medicine and clinical toxicology.
- a10. List the principles and fundamentals of quality in professional practice in the in the field of forensic medicine and clinical toxicology.
- a11. List the basics and ethics of scientific research in the field of forensic medicine and clinical toxicology.

b) **Intellectual Skills**

By the end of the course, students should be able to:

- b1. Interpret the features of the scene of the crime in the field of forensic medicine and clinical toxicology for proper diagnosis of forensic cases.
b2. Select from different diagnostic alternative the ones that help reaching a final diagnosis for forensic and toxicology cases.
b3. Link between knowledge for Professional problems' solving.
b4. Conduct a research study and / or write a scientific study on a research
b5. Identify the degree of injury or toxicity to determine the percent of permanent infirmity.
b6. Analyze researches and issues related to injuries & permanent infirmities

c) Professional and Practical Skills
By the end of the course, students should be able to:
c1. Describe the basic and modern professional skills in the area of forensic medicine.
c2. Write and evaluate standard medico-legal report of injured or intoxicated person

d) General and Transferable Skills
By the end of the course, students should be able to:
d1. Communicate with each other's and interact effectively and ethically with patients presenting with signs of poisoning or unjury in the admission units of the hospitals then write a report about the case and discuss it with staff members.
d2. Manipulate computer programs, do web search, to write an essay about different types of work injuries or toxicity.
d3. Use of different sources for information and knowledge.
d4. Develop rules and indicators for assessing the performance of others.
d5. Work in a team, and team's leadership in various professional contexts.
d6. Present orally reports about injury or intoxicated person in accordance with the standard scientific guidelines in seminars or group meetings, discuss results, defend his/her ideas with staff members. Students can recognize and accept the limitations in their knowledge and clinical skills.

Clinical Toxicology module:
a) Knowledge and Understanding:
By the end of the course, students should be able to:
a1. List the analytical and instrumental methods used in investigating crimes.
a2. Describe principles of extraction of various drugs or poisons from body fluids and the keratinized tissues.
a3. Describe principles of toxicology of different types of poisonous substances and drugs including classification, mechanism of action and clinical features of toxicity.
a4. Explain designer drugs.
a5. Describe basic knowledge of poisonous anthropods, mushrooms, poisonous plants and toxic marine life.
a7. Explain toxicity of centrally active drugs.
a8. Explain analgesics as acetominophine salicylate, non steroidal anti-inflammatory drug toxicity.
a9. Demonstrate toxicity of muscle relaxants.
a10. Demonstrate vitamins toxicity.
a11. Demonstrate knowledge of toxicity of heavy metals and inorganic agents.
a12. Describe pesticides poisoning.
a13. Describe inhalation poisoning, volatiles and solvents.
a14. Describe corrosives poisoning.
a15. Describe toxicity of cosmetics, toilet articles, baby powder, and camphor.
a16. Describe examination the scene of death in cases of poisoning.
a17. List chemicals and drugs which induce organ toxicity.
a18. Explain toxins that affect the cardiovascular system.
a19. Explain chemicals and drugs which induce hepatic and renal toxicity.
a20. Explain toxic injury of the eye.
a21. Demonstrate endocrine agent toxicity.
a22. Demonstrate knowledge of geriatric toxicology.
a23. Demonstrate the criteria, clinical features, diagnosis and general management of dependence producing substances and drugs.
a24. Describe principles of pediatric resuscitation in cases of toxicity.
a25. Describe principles of management of overdose in pregnancy.
a26. Explain how to manage the respiratory complications in poisoned patient.
a27. Mention the antidotal studies and evaluation of toxicity in human subjects.
a28. List the general scheme for testing drugs or poisons.
a29. Describe Scientific developments in the field of clinical toxicology.
a30. Mention the ethical and legal principles of professional practice in the field of clinical toxicology.
a31. Mention the principles and fundamentals of ethics and legal aspects of professional practice in the field of clinical toxicology.
a32. List the basics and ethics of scientific research.

b) Intellectual Skills
By the end of the course, students should be able to:
b1. Interpret the features of the scene of the crime in the field of forensic medicine and clinical toxicology for proper diagnosis of toxicology cases.
b2. Select from different diagnostic alternative the ones that help reaching a final diagnosis for clinical toxicology.
b3. Interpret features of a case study of poisoning to solve the problem and formulate treatment plan.
b4. Conduct a research study and/or write a scientific study on a research problem.
b5. Assess risk in professional practices in the field of clinical toxicology.
b6. Plan to improve performance in the field of clinical toxicology.
b7. Identify of clinical toxicology problems and find solution.
b8. Analyze research and issues related to clinical toxicology.

c) Professional and Practical Skills
By the end of the course, students should be able to:
c1. Perform some chemical tests on labs to identify some poisons.
c2. Write and evaluate standard medico-legal report of intoxicated person through interpretation of history, clinical examination and laboratory test findings.
c3. Evaluate and develop methods and tools existing in the area of clinical toxicology.

d) General and Transferable Skills
By the end of the course, students should be able to:

d1. Communicate with each other and interact effectively and ethically with patients presenting with signs of poisoning in the admission units of the hospitals then write a report about the case and discuss it with staff members.
d2. Manipulate computer programs, do web search, to write an essay about recent subjects of toxicology or worldwide problems related to toxicology, with trial of solving.
d3. Assess himself and identify personal learning needs.
d4. Use of different sources for information and knowledge.
d5. Develop rules and indicators for assessing the performance of others.
d6. Work in a team, and team's leadership to perform some laboratory tests for detection of some poisons.
d7. Manage time Efficiently. d-8 Present reports orally about toxicological cases in accordance with the standard scientific guidelines in seminars or group meetings, discuss results, defend his/her ideas with staff members. Students can recognize and accept the limitations in their knowledge and clinical skills.

3. Contents of the course:

4. Teaching and Learning Methods:
   4.1- Lectures
   4.2- Practical sessions with demonstration of specimens, photographs, x-rays,
      microscope slides in department museums.
   4.3- Assignment
   4.4- Attending and participating in scientific conferences workshops and
      discussion to acquire the general and transferable skills.
   4.5 Field training

5. Student Assessment Methods

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>The assessed ILOs</th>

</thead>
<tbody>
<tr>
<td>5.1 - Observation of attendance and absenteeism.</td>
<td>- General transferable skills, intellectual skills</td>
</tr>
<tr>
<td>5.2 - Log book</td>
<td>- General transferable skills</td>
</tr>
<tr>
<td>5.3 - Written Exam:</td>
<td>- Knowledge</td>
</tr>
<tr>
<td>- Short essay: 40%</td>
<td>- Knowledge</td>
</tr>
<tr>
<td>- Structured questions: 25%</td>
<td>- Knowledge, intellectual skills</td>
</tr>
<tr>
<td>- MCQs: 20%</td>
<td>- Knowledge, intellectual skills</td>
</tr>
<tr>
<td>- Commentary, Problem solving: 15%</td>
<td>- Intellectual skills, General transferable skills</td>
</tr>
<tr>
<td>5.4 - Structured Oral Exam</td>
<td>- Knowledge, Intellectual skills, General transferable skills</td>
</tr>
<tr>
<td>5.5 - OSPE</td>
<td>- Practical skills, intellectual skills</td>
</tr>
<tr>
<td>5.6 Computer search assignment</td>
<td>- General transferable skills, intellectual skills</td>
</tr>
</tbody>
</table>

Assessment Schedule

Assessment 1: Log book .......week (80)
Assessment 2: Final Written exam…week (96)
Assessment 2: Final OSPE …week (96)
Assessment 2: Final oral exam…week (96)

Weighting of Assessments

<table>
<thead>
<tr>
<th>Review</th>
<th>Week 28-30 = Pass</th>
</tr>
</thead>
<tbody>
<tr>
<td>Final Written exam</td>
<td>50%</td>
</tr>
<tr>
<td>Final oral exam</td>
<td>30%</td>
</tr>
<tr>
<td>Final OSPE</td>
<td>20%</td>
</tr>
</tbody>
</table>

Total 100%

Formative only assessment: simple research assessment, Log book, attendance and absenteeism

6. List of References

6.1-Course notes: Lectures notes prepared by the stuff members of the department

6.2-Essential Books:
- Simpson’s Forensic Medicine by Knight, B (1990)
- Medical ethics. by Jones & Barlett

6.3-Recommended Books:

6.4-Periodicals and websites:
Forensic Science International, Egyptian Journals of Forensic Medicine and Clinical Toxicology, International Journals of Forensic Medicine and Clinical Toxicology

www.sciencedirect.com

7. Facilities Required for Teaching and Learning

1- ADEQUATE INFRASTRUCTURE: including teaching places (teaching class, teaching halls, teaching laboratory), comfortable desks, good source of aeration, bathrooms, good illumination, and safety & security tools.

2- TEACHING TOOLS: including screens, computers including cd (rw), data shows, projectors, flip charts, white boards, video player, digital video camera, scanner, copier, colour and laser printers.

3- COMPUTER PROGRAM: for designing and evaluating MCQs

Course Coordinator: Dr. Soheir Ali Mohamed

Head of Department: Dr. Maha Abdel Hameed Hilal

Date: 18/12/2011, Revised: 1/9/2012, Revised: 1/12/2013
